

SUBJECTIVE QUESTIONS

Q1: Year-Long Project

Describe one year-long project you would want to undertake with the WnCC team. Explain your project in detail, the motivation for the project, and who it would help.

I'd like to make a learning platform inspired by Duolingo to learn different coding languages in a structured way.

The idea is to teach concepts step by step. A short lesson is accompanied by quizzes, code writing. After 2-3 concepts, there would be a small project. It is mostly based on understanding every concept in detail.

This would also include leaderboards and league type structure and streaks which encourage users to practice daily as to maintain his/her league or streak and keep engaging.

My motivation behind this project is to help those students who don't know where to start coding from. This could be a good platform to help them get engaged with this as it starts from a basic level and moves up to building large scale projects.

Q2: Your Initiative

Applying for this position, you must have certain expectations from WnCC as the coding club of IITB. Imagine yourself as the Convenor of WnCC. What is one thing you would personally want to do, regardless of whether it already exists? Why does it matter to you, and how would you make it happen?

The initiative that I'd really like to take is conducting beginner sessions for those who are new to coding. There are many people in the institute who are very good at coding which makes the people who are doing it for the first time anxious and overwhelmed. So I'd like to help those students overcome their fear by making them comfortable with beginner-friendly sessions. I can also relate to this as it is not easy to start from scratch without any guidance. This would help them build confidence.
